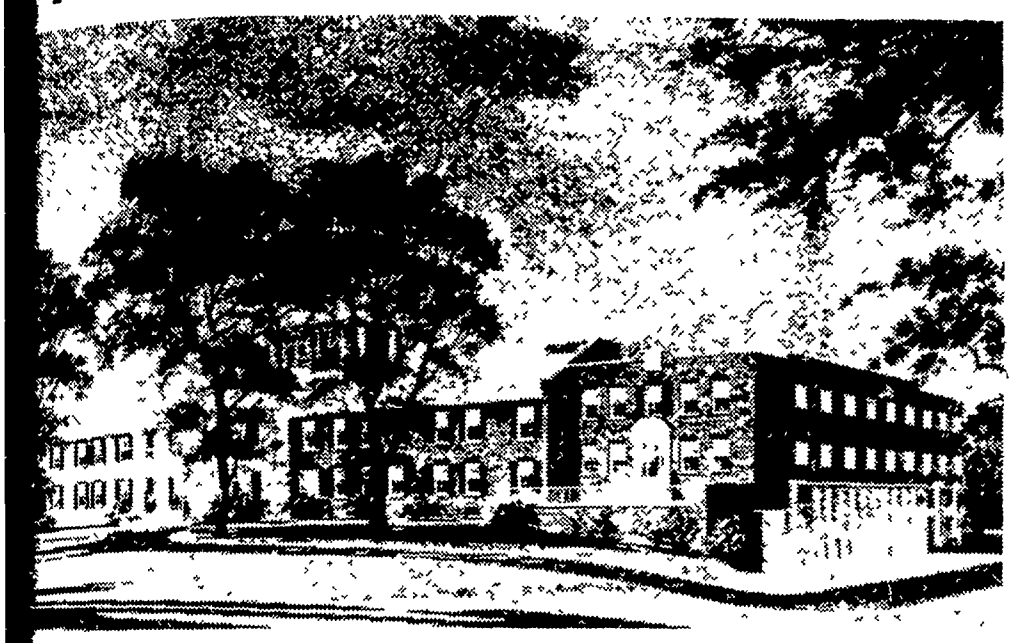
# 4-H Center Dedication Set



STS DRAWING of the new National 4-H Club center at 7100 Conn. Avenue, n, D C, to be dedicated during the 29th National 4-H Conference June 13-19.

## t Slated During 29th ference, June 13 - 19

s Note· During our recent visit to Washington, had the privilege of inspecting the new National in Chevy Chase, Md., northwest of the capitol and construction work was proceeding at that the pressure of the approaching 29th Annual 4- ce, which begins a week from today. We have knowing if the conference will be conducted in but feel sure that in coming years, the facilities re will make definite contributions to rural

l openings of the National 4-H Club Center will he 29th National 4-H Conference opening June nington, D. C. and running through Friday, June

The educational and training center, located on 12½-acre grounds, is dedicated to the four-fold development of youth as exemplified in the Head, Heart, Hands, and Health aims of 4-H Clubs.

Through it, opportunity will be provided for training young people in character building and citizenship, and guiding their leaders in program planning and development.

This year, because of many public contributions in support of the Center and the significant place of donors in the entire 4-H program, a "Friends of 4-H Day" will be held during the conference.

Pennsylvania 4-H Club members are among those responsible for furnishing bedrooms in the center.

The Center is located in Chevy Chase, a beautiful residential suburb of the Nation's Capital. Near the many historic and memorable sights in Washington, D. C, it is convenient to incoming guests on route 240A.

The three buildings of the

## State Soil Commission Asks End of 'New Start' Ruling

HARRISBURG—The Pennsylvania Soil Conservation Commission has released a letter to President Dwight D Eisenhower urging him to change Bureau of the Budget policies concerning small watershed projects under Public Law 566.

Following is the text of the letter

"Interest in Pennsylvania in the work being carried on under Public Law 566, the Watershed Protection and Flood Prevention Act, is gaining rapidly Applications totaling over 600,000 acres have already been received in 1959

"Our State Soil Conservation commission is responsible for approving requests for assistance under this Act and recommending priority for planning to the Federal government We have been concerned about regulations of the Bureau of the Budget limiting 'new starts' on projects in any year

"To us this policy discriminates against the smaller watersheds For example, if there is a limit of two starts in Pennsylvania this year, we naturally are inclined to approve and give priority to two of the largest watersheds where a greater amount of work can be accomplished

'At a meeting of the State Soil Conservation Commission held May 21, 1959. it was resolved to go on record opposing the limitation on 'new starts' and suggest that any limits be based on funds available In this way our Commission would be able to choose from all applications on the basis of merit and need rather than size

'We would appreciate any attention that you could give to this matter"

According to the State Office of the Federal Soil Conservation Service, one 'start' has been authorized in Pennsylvania This is for the Lackawaxen Tributaries project in Wayne County The watershed encompasses 26,625 acres.

## Egg Shell Quality Tests Seek End To Annual Loss

Breaking of eggs at the farm and during marketing costs Pennsylvania egg producers and marketing agencies about two and one-half million dollars per year, reports Werner J. Mueller, poultry researcher at the Pennsylvania State University.

Dr. Mueller and his associates are studying the effect of temperature and humidity on egg shell strength.

These studies have found that hens kept at a constant temperature of 85 degrees Fahrenheit for 8 months produced eggs with thinner shells than hens kept at a constant temperature of 55 degrees F.

Hens housed at 85 degrees F. ate 20 per cent less feed and had lower calcium levels than hens at 55 degrees F.

The Penn State researchers have developed new testing devices for determining shell strength of eggs.

Dr. Mueller believes accurate and rapid methods of measuring shell strength will greatly help in improving shell quality through breeding, feeding, and management.

Egg breakage is especially serious in late spring and during the summer.

Dr Mueller and associates found that methods commonly used to determine shell strength were not very accurate measures of shell strength for commercial egg handling.

Air conditioned rooms control temperature and humidity for laying hens in the Penn State tests.

New egg shell testing devices include a pressure machine to measure resistance to pressure, an elasticity machine to measure compression, and an impact machine to test the impact needed to break shells.

## USDA Defines Policies On Lamb-Buying Systems

The U. S. Department of Agriculture today issued a statement defining its general policy on certain current lamb buying practices and how provisions of the Packers and Stockyards Act apply to these practices.

USDA announced that this statement has now been issued as Sec. 203.1 of Chapter II, Title 9, Code of Federal Regulations. It is not issued as a rule or regulation in itself, but is an interpretation that certain practices are considered unfair under provisions of the P&S Act.

The policy announcement says it has come to the attention of USDA's Livestock Division that some packers, dealers and market agencies subject to provisions of the Act are engaging in certain practices that are injurious to producers, in the purchase and sale of lambs in prominent lamb producing areas of the United States.

These practices relate to the discounting of prices paid producers for heavy lambs

Specifically, the following methods of buying lambs are considered unfair practices under P&S Act provisions

1 A buyer limiting payment for lambs to a designated average weight, and not paying the lamb producer for any additional weight

2 A buyer subtracting weight from the true and actual weight of the lamb.

The above practices result in issuance of incorrect scale tickets, invoice, and other documents relating to purchases and sales and in misleading market information.

USDA officials believe provisions of the P & S Act (under Title II and Title III) prohibit all packers, dealers, and market agencies subject to the Act's provisions from engaging in these practices.

In addition to the above mentioned practices, USDA's Livestock Division has received numerous complaints from lamb producers about methods used in price discounting for excess weight.

One example of the complaint is when a buyer agrees to pay $21.00 per cwt. for a lot of lambs provided the average weight is not more than the 105 pounds, but discounts the $21 00 per cwt. price at the rate of 25 cents for each pound in excess of the 105 pounds.

The discounted price is then applied to the entire weight of the lambs. This makes the final sales pice subject to a contingency based upon the extent of excess weight

The final price can only be

# Steer Market Unsettled

James E. O'Hare,
In Charge, Market News Branch

WEEKLY REVIEW—
June 5, 1959—

In mixed trading this wk. slaughter steers closed steady to weak, on Mon. the trend was steady to 50 higher but this advance was offset by a 25-50 lower market Wed. Cows were steady to 25 higher. Good grade fed bulls were 25-50 lower and other grades of bulls held steady. Stockers and feeders sold at steady rates.

Slaughter steers accounted for about 60 per cent of the supply and stockers and feeders 30 per cnt. Receipts will total about 3472 head, compared with 3938 head last week.

Quality was improved with stveral loads and lots high-choice and prime on the mkt. Bulk of slaughter steers made 28.50-30.50, high-choice and mixed-high choice and prime grade steers weighing 1050-1307 lb. brought 31 - 32.50. Good to low - choice 26.50-28.50.

Few lots Good and Choice heifers made 26.-28.50. Utility and coml. bulls ranged from 23-26, and good grade fed bulls made 25.75-27.25.

Cutter and utility cows sold for 18.50-22.75, and Coml. cows up to 23.75, while Canners and low-cutters made 16.75-18.50.

Good and Choice 800-1050 lb. feeder steers made 28-30, Med. and good brought 27.-28 25 Good and choice 550 - 800 lb. stock steers made 30-36, but choice grade was scarce and most sales stopped at 34. Medium and good stockers made 28 -30.25. A few lots good grade stock calves sold at 32-36.

Calf receipts will total about 100 head more than last week's 485 head count. Trading was moderately active. Vealers closed 1 lower with the decline coming on Wed. good and choice vealers made 29-35 and choice and prime grade sold for 35-37, a few prime vealers reached 39 on Mon. Standard and low-good brought 23-29, and Utility sold down to 18.

Trading was moderately active for about 1500 head of hogs, about 450 head less than last week. Barrows and gilts closed fully steady. Sow were steady. U. S. 1-3 grade 190-230 lb. barrows and gilts commanded 18-18.50, a few lots No. 3 sold down to 17.75. Hogs more uniform for wgt. and grade incl 1-2 grade 190-225 lb. made 18.50-19.25 a few lots No. 1 the same wgt. reachtd 19 50. 240-260 lb. butchers made 16 75-17.75

## Chicago Cattle

# Cows Reach 7-Yr. High

USDA MARKET
NEWS SERVICE

CHICAGO JUNE 4—
WEEKLY REVIEW

CATTLE—Receipts fully 5 per cent larger than last wk. and the largest in three weeks but 10 per cent smaller than corresponding week last year, much better distribution of receipts this week than last. Percentage of the various classes in receipts virtually the same as last week except the percentage of cows decreased somewhat and was the smallest for any week so far this year. Fully 75 per cent slaughter steers, around 15 per cent heifers and barely 5 per cent cows.

Prime steers still very scarce although small increase in the percentage of prime compared last week. About two-thirds of the steer supply choice, the highest percentage of choice for any wk. since last November, average wgt. of slaughter steers promising to be heavier than last weeks average of 1155 lbs.

Slaughter steers opened strong to fully 50 higher but the advance more than lost later, closing steer prices steady to 50 lower than late last week with extremes off 75-1 on high-choice and prime grades. This marks the eighth straight wk. when steers closed steady to lower

(Turn to Page 5)

## New Holland

# Steers Off $1; Rest S

Receipts on the Thursday beef and veal market tallied 851 cattle and 279 calves, with steers off about $1 on all grades, all other classes about steady.

Choice butcher steers — $29-29.75; good — 27-29, and plain-medium — 25-27.

Choice heifers — $26-27.50 good — 24-26, and pl.-med. 21-23.75.

Good bulls — $26-28, and pl. - med — 24.25-25.75.

Good butcher cows — $22-23; pl.-med. — 20-22, and canners and cutters — 17.50-20.

Stocker and feede $26-28; choice - pr er calves—$36 37 33-36; med — 29-3 in calves — 25 29

The June 3 dair very active on all to rains, with far ing time off to atte tion. Receipts inc cows, 24 stock bul stock heifers

Fresh Holstein c $350-485; Guernse 319, others — 240-3

Stock bulls—$12 ock heifers — 65 1 ing first calf heife 305.

The June 1 horse sale had a dull ma classes, with too fe establish a market

Pony mares bro 257.50; geldings—$ Riding horses—$ driving horses — $ Heavy killers—$ light — 8-9 cents

## Real Estate For Sale

Farms and Summer Homes in Cecil County, Maryland, 83 acre farm, all tillable, also 10 acres woodland; lovely old brick house with all modern conveniences, large dairy barn, milk house, corn cribs, silo, large pond, $40,000 Will finance.

150 acre farm, 3 dwellings, farm buildings complete, an excellent farm—$50,000 Financing possible.

100 acre farm, some river front-good ducking shore, good for business site or farm. $100,000.

A summer home with 216 foot waterfront and pier — situated on 7 acres of land on the North East River. Unusual opportunity.

## Farm Storage Is Increasing

More than 10 million bushels of grain storage capacity was placed on the Nation's farms in the first quarter of 1959 as a result of the Department of Agriculture storage facility loan program, according to Landis G. Becker of the Lancaster County Agricultural Stabilization and Conservation office.

Storage facility loans totaling more than $2,000,000 were made during the January-March period to approximately 2,700 farmers, Becker said. In addition, 182 farmers borrowed a total of $268,000 to finance mobile crop drying equipment for use in connection with storage facilities.

Loans for up to 80 per cent of the cost of grain storage facilities are available through Agricultural Stabilization and Conservation offices to help farmers meet the needs for farm grain storage.

Since this program began in 1949, the loans have been used to add 412 million bus. to the Nation's storage capacity and to install drying equipment valued at more than $5,000,000.

## ● 4-H Center

(From page 1)

Center sit away from the street on a beautiful landscaped campus. Their classic design is accentuated by the expanse of green lawn, trees and a formal garden framed by a horseshoe driveway.

Each building is named in memory of a great 4-H Club leader The main building honors C B Smith, of Michigan, former chief of the office of Cooperative Extension U S Department of Agriculture

The two smaller structures are named for Miss Gertrude L Warren, of New York, who was in charge of Girl's 4-H Club work, and Ray Turner, of Michigan who was responsible for Boys' Club activities, both in the federal extension office.

As many as three-hundred people can dine in the Smith Hall dining room. Most meals will be served from the kitchen in cafeteria style and facilities are also available for large banquets.

The dining room, which opens onto a spacious terrace, can be transformed into an auditorium seating about 400 persons.

The three wings of Smith Hall contain bedrooms which will sleep about 270 persons in air-conditioned comfort. Each room accomodates up to four persons and is equipped with chairs, a writing desk and ample closet space. Shower and bathroom facilities are located on each floor.

Smaller rooms and a recreation room, complete with juke-box, ping-pong tables, and television, are provided in Smith. Guests can purchase supplies at the Center book store.

A recording room will be used for tape recordings. Complete photographic services will be available for meetings and conferences.

Many states have aided in furnishing the Center. The lobby of Smith Hall is being decorated by the Massachusetts State 4-H Foundation in honor of George L Farley. The conference room is being furnished by 4-H Club members and leaders in Wisconsin

The offices of the National 4-H Club Foundation are also housed in Smith Hall in the front section of the building The Center is a program of the National 4-H Club Foundation.

Warren Hall, south of Smith Hall, is reserved for housing small groups and servicing special meetings. It contains nine bedrooms and accomodates a total of 30 persons.

Special lunches and buffets can be prepared in the compact kitchen and a large lounge with fireplace provides a home-like atmosphere The lounge is furnished by the State 4-H Club Agents Association of New York

Smaller rooms and classrooms of the Center are found in Turner Hall. Each of the six rooms will hold from 12 to 50 persons at one time They may also be used for exhibits and demonstrations

During the summer, meetings can also be held outdoors with shade provided by the many trees that grow on the campus A variety of trees can be found in the wooded area of the Center such as dogwood, birch, and magnolia.

There is ample parking area on the campus for about 100 cars and city bus service is available at the front drive of the Center.

## Freedom Academy

Bills before the Senate and House to create a Freedom Commission deserve the thoughtful study of everyone who values his freedom under our democratic system of government.

The naming of such a Commission would be the first step toward the creation of a national Freedom Academy that would have the same status as the military and naval academies at West Point and Annapolis.

The purpose of such an Academy would be to train "freedom fighters" of the Free World to "battle conspiratorial, organizational and operational techniques of Communism."

Bills to establish the Commission and Academy are sponsored by Sens. Karl Mundt (R., S.D.), Paul Douglas (D., Ill.), Clifford Case (D., N. J.), and by Reps. Sydney Herlong (D., Fla) and Walter Judd (R, Minn.).

**A Third Front**

The Communists are waging the cold war on three fronts — military, economic, and propaganda. The last is the only one on which we are doing an ineffective job of defending democracy.

"While the Free World has developed a powerful defense establishment to prevent a "hot war"—or fight one if attacked — we have tragically ignored in great measure the political battlefields of the cold war," Sen. Mundt points out.

On the military front, the Communist nations and the Free World are rated by many experts as about even-up. The economic strength of the Free World is undeniably superior.

Russia's superiority in the use of propaganda is also acknowledged. The Kremlin spends billions of dollars to train propaganda agents and to finance their infiltration into the Free World nations. We have taken no effective countermeasures.

**Fifth Columnists**

For every Kremlin-trained agent in the Free World there probably are hundreds of "fellow travelers" who form an extremely dangerous Communist "fifth column."

Sen. Mundt said in a recent Senate speech that communist agents "have infiltrated our universities, our cultural and religious groups, our labor and farm organizations, our newspapers, radio-TV and movie industries."

Sponsors of the bills say the purpose of the Freedon Academy would be to train students "as to the methods of communists, and learn techniques to effectively counteract communist tactics which make use of infiltration, propaganda and espionage."

"It is not" Mundt explained, "our intention to emulate the communist conspiratorial techniques in conducting our side of this cold war into which we have been reluctantly but realistically forced.

"Our methods and techniques can and should be developed in full harmony with our democratic principles, our Christian ethics, and our civilized concept of morality.

"With right on our side, we should be able to envolve methods and techniques far more effective than those utilized by the communists to exploit those with whom they come in contact."

# THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY DR. KENNETH J. FOREMAN

**Bible Material:** I Kings 21 1—22 40.
**Devotional Reading:** Jeremiah 22.1-5, 13-16.

## Lust For Power

**Lesson for June 7, 1959**

IS THERE one sin from which all other sins come? Many theologians think there must be; but they do not all agree on what sin is the root-sin of all the rest. One sin which has been singled out for this doubtful honor has been called "the lust for power." It is not wrong to desire power; otherwise Jesus would have severely condemned the two disciples who wanted to sit on thrones at his right and left. It is not wrong to wish to influence other persons, otherwise it would be a sin to run for president of anything. Nevertheless, desire for power can be so exaggerated that it becomes a passion, a soul-destroying passion.

Dr. Foreman

**Law and the Lust for Power**

There is a first-class example of how the lust for power can run away with a man, an example of how other sins are spawned by this one, in the Bible story of King Ahab and the private citizen named Naboth Nearly all readers of the Bible know this story, and those who do not know it should look it up (see the references given here), for it is a dramatic story. King Ahab was of course one of the wealthiest men in the kingdom. He had all he needed and more besides. But he wanted the vineyard of the small farmer Naboth. He wanted it so much that he was willing to break the law of the land, he was willing to go even as far as murder, to get what he wanted.

Ahab could never have got that vineyard by legal means If Naboth did not want to sell, there was no law to make him. More than that, according to the law of those times, Naboth was required to hold on to his property, Ancient Hebrew law saw to it that every family was provided with land, and must not get rid of their
erty, large or small
first "stumped" by

## Some Special Desserts

by Mrs. Richard C. Spence

This time of year often calls for some extra entertaining—bridal showers, graduation parties and lots and lots of outdoor get-togethers. If you are looking for some extra special desserts, you might like to try some of the following recipes we have today

If pie is your favorite, try this bright newcomer, Cherry Apricot Pie. Perfectly matched, the fruits combine in a brilliant red-orange pie filling that't marvelously refreshing Honey, brown sugar and allspice are the pie's "sugar 'n spice."

**Cherry Apricot Pie**

2 cups sifted enriched flour
1 teaspoon salt
2/3 cup shortening
3 to 5 tablespoons cold water

Sift together flour and salt. Cut or rub in shortening until mixture is crumbly Sprinkle with water, mixing lightly until dough begins to stick together.

Turn out on floured board or pastry cloth and press the dough together. Cover or wrap in waxed paper. Place in refrigerator while preparing Fruit Filling.

Divide dough into halves. Roll one half to circle about ⅛-inch thick and fit into 9-inch pie pan Roll remaining half of dough for top crust.

Turn filling into bottom crust. Arrange top crust over filling. Trim and flute edge. Prick or slash top pastry to allow steam to escape.

Bake in hot oven (425 degrees) 34 to 40 minutes Makes one 9-inch pie.

**Double Fruit Filling**

2 tablespoons cornstarch.
¼ cup brown sugar
¼ teaspoon ground allspice.
¼ teaspoon salt
¼ cup honey
Red food coloring
1¾ cups drained red sour cherries (1-lb. can)
2 cups drained apricot halves (1 lb., 4 oz. can)

In saucepan, combine cornstarch, brown sugar, allspice, salt, honey and food coloring Drain canned fruits.

Add enough apricot syrup to cherry liquid to make one cup liquid. Add liquid to the mixture in saucepan. Cook, stirring constantly, until thickened. Stir in apricots and cherries. Cool slightly. Turn into bottom crust.

* * *

Another dessert treat, Cocoa Pound Cake is so moist and tender that it melts in your mouth.

**Cocoa Pound Cake**

2 cups sifted enriched flour
½ cup cocoa
1 cup soft butter or margarine
1¼ cups sugar
1 cup eggs (4 or 5), beaten
2 teaspoons vanilla extract

Sift together flour and cocoa. Cream butter or margarine thoroughly. Very gradually add sugar, beating until smooth and fluffy. (This requires 10 to 12 minutes).

Add eggs gradually, beating well after each addition. Blend in vanilla extract. Add flour mixture to creamed mixture and beat just until smooth.

Turn batter into greased paper-lined 5¼x9½-inch loaf pan. Bake in very slow oven (300 degrees) about 1½ hour.

Cool in pan 10 minutes Remove from pan and allow to cool completely on wire rack.

* * *

Springtime Party Torte or Daffodil Petits Fours? Try both of these "fresh-as-spring" ideas. First bake the golden light Sponge Cakes.

One recipe makes two 8-inch cakes. To make the attractive golden torte, cut the two cakes horizontally into two layers. Spread with tangy, bright lemon-coconut filling.

**Sponge Cake**

1⅓ cups sifted enr... flour
½ teaspoon baking ... der
¼ teaspoon salt
6 egg whites
½ cup sugar
6 egg yolks
1 cup sugar
½ cup water
1½ teaspoons van... tract
½ teaspoon almond ... tract

Sift together flour, ... powder and salt In ... bowl, beat egg whites ... frothy. Gradually beat ... cup sugar and contin... ing until stiff peaks ... med.

Beat egg yolks until ... and lemon colored ... one cup sugar gradu... continue beating until ... iness disappears ... water and extracts ... uid into egg yolk mix... Fold in flour ... Spread batter over ... whites and gently fo... gether. Turn into gre... inch square pans ... slow oven (325 degr... to 40 minutes

## Soft Water Saves Money In Plumbing and Heating!

Cliff Lehman

Wherever water flows in your home, you need soft water protection When hard water is heated, the calcium and magnesium minerals (usually bicarbonates) in the water are converted to another less soluble form. These less soluble salts come out of solution as solids and gradually build up a layer of hard, scaly material on the inside of pipes and other equipment through which the water passes.

As little as ⅛ inch of scale in water-heater coils can boost heating bills as much as 16 cents out of each dollar, and reduce efficiency by more than 20 per cent. This scale also acts as an insulator which, rather than passing the heat along to the water, develops hot spots which eventually weaken and burn through pipe walls. When this scale collects in the pipe, the boilers, the radiators, showerheads and other fittings, the flow of water is seriously reduced. Often the piping becomes completely clogged and must be replaced. Unfortunately, such repairs to heating and plumbing systems often mean tearing out walls and pulling up floors—a messy, expensive job.

The radiator of your car may last twice as long in areas having water hardness of 5 grains * than it will in areas of 17 or 18 grain hardness, because there is no hard water deposit to clog the circulating system and cause overheating of the engine.

When you wash your car, soft water readily lifts away dirt and road grime. Because gritty particles and hard rubbing are eliminated, little scratches which destroy the finish of your car are eliminated, too. There are no streaks or curdy soap deposits, either. There will be a gleam in your eye when you see what a gleam soft water puts on your car

1 grain equals approximately 17 parts of hardness minerals per 1,000,000 parts of water.

I will be glad to stop at your house and discuss your water problems with you. We have solved many of your neighbors problems with inexpensive water treatment equipment Call Cliff Lehman, Water Conditioning Consultant, at Century, 15 W. Chestnut Street, Lancaster. Phone EX 4-9365 —Adv.

Cook mixture over boiling water 10 to 15 minutes. Remove from heat and stir in coconut. Cool.

For Daffodil Petits Fours, trim crusts from cooled cakes. Cut each cake into 12 pieces Dip cakes into Daffodil Frosting, turning to carefully coat all sides Allow to drip on rack placed over waxed paper. When the frosting is set, decorate tops with leaves or rosettes.

**Daffodil Frosting**

3 cups sugar
¼ teaspoon cream of tartar
2 cups hot water
2½ cups sifted confectioners' sugar (about)
Yellow food coloring
2 teaspoons lemon extract

Combine sugar, cream of tartar, and hot water in saucepan. Bring to boiling and cook syrup to 226 degrees. Cool to lukewarm. Blend in one cup of the sugar gradually. Add yellow food coloring and lemon extract. Add enough more sugar to make frosting of pouring consistency. Makes about two dozen small cakes.

* * *

**Cocoanut Almond Cookies**

1 cup shortening
2½ cups sifted flour
½ teaspoon salt
¾ teaspoon baking powder
1½ cups sugar
1 egg
1 tablespoon water
1 teaspoon almond extract
½ cup flaked cocoanut
¼ cup blanched almonds, halved

Sift together flour, salt, and baking powder. Cream shortening and sugar. Beat in egg, water, and almond extract. Add sifted ingredients and cocoanut to creamed mixture.

Shape into balls, using a rounded teaspoon of dough for each. Place on cooky sheet. Flatten with bottom of a glass to 3/8-inch thickness. Top with almond half. Bake in a moderate oven (350 degrees) for 12 to 15 minutes.

* * *

If you are serving a brunch you might like these Sweet Talk Pecan Rolls with your coffee.

**Sweet Talk Pecan Rolls**

1 package or 1 cake compressed or dry yeast
¼ cup lukewarm water
¾ cup scalded milk
¼ cup shortening
¼ cup sugar
1 teaspoon salt
2½ to 3 cups sifted enriched flour
1 egg. beaten
¾ cup rolled oats, (quick or old-fashioned, uncooked)

Soften yeast in lukewarm water. Pour scalded milk over shortening, sugar and salt; stir occasionally until shortening melts. Cool to lukewarm. Stir in one cup of flour and the egg; add softened yeast and oats. Stir in enough more flour to make a soft dough.

Turn out on lightly floured board; knead until satiny about 10 minutes. Round dough into ball; place in greased bowl and brush lightly with melted shortening .Cover and let rise in a warm place until double in size, about one hour. Punch down; turn out on lightly

floured board Cover and let rest 10 minutes.

In a 9-inch square pan, combine ½ cup brown sugar with ⅓ cup melted butter Arrange 18 pecan halves over sugar mixture. Roll dough to form a 12-inch square. Brush with melted butter.

Sprinkle with cinnamon-sugar (made by combining two tablespoons granulated sugar and one teaspoon cinnamon).

Roll up as for jelly roll, seal edges firmly. Cut in nine slices; place rolls cut-side up in pan Cover, let rise in warm place until double in size

Bake in moderate oven (375 degrees 25 to 30 minutes Remove from pans immediately Makes nine pecan rolls

**What Makes Meringue Form Beads or "Leak"?**

Beating the egg whites too much before you add sugar tends to cause meringue to leak

To get the best sweetness and texture for meringue use two tablespoons sugar to each egg white. Beat the egg whites until foamy, then add sugar gradually

It's best to put the meringue directly on the hot pie filling Then it's not apt to leak or to form beads

## ● USDA Defines

(From page 1)

ascertained by weighing the lambs as they are sold to the buyer.

While this may not be an unfair practice per se, USDA recommends this lamb buying practice be discontinued because it lends itself to—or leaves the way open for—confusing and hence deceptive practices

The confusion may be used by a buyer as a means of forcing a producer to accept an unwarranted discount

In making this policy announcement USDA is not discouraging payment of the true market value for heavy lambs. This statement of general policy becomes effective upon publication in the Federal Register.

Copies of the policy statement are available from the Livestock Division, Agricultural marketing Service, U. S Department of Agriculture, Washington, D C.

## ● PENB Board

(Continued from page 1)

opinions on the issue to PENB directors Industry reaction to both these requests were expressed in the ballots cast

While this two-to-one vote reflects board and industry thinking, Thomas, speaking for the Board, stated that immediate steps have been taken to make arrangements for a meeting with egg industry leaders at the APHF Convention in St. Louis in July to provide a forum for discussion on this vital issue and to initiate a unified plan to strengthen the egg voice in the poultry industry

It is hoped, thereby, to develop greater stabilization in the egg industry in regard to promotional and merchandising, and, at the same time build greater confidence in the industry in a promotion program

The Department of culture has announced the interest rate to be ed producers and oth price-support loans on crops will be 3¼ per year.

# t Control Sprays t Milk Production

ttle are bothered with methoxychlor or dairy species of flies animals producing milk. quitoes Chester Methoxychlor applied dry is gent Robert A. safe to use and gives effect- r warns these ive control of horn flies and ts often reduce mosquitoes. uction in dairy

Common oil-base fly sprays containing 05 to 0.1 per cent pyrethrins or three to five per cent organic thiocyanate are also widely used on the dairy cattle.

Many commercial fly sprays also contain an insect repellent which increases its effectiveness. These formulations are commonly used as mist sprays at the rate of one to two ounces per animal in daily applications.

Aerosols and space sprays will also give satisfactory control of flies when properly used Aerosols, containing at least 0 5 per cent pyrethrins plus five per cent synergist, are most satisfactory for killing flies.

Spray concentrates containing one per cent pyrethins and ten per cent synergist can also be used for both space spray and on animals. Such concentrate is usually diluted 1 to 19 with water for use in compressed air sprayers, and one to nine for use in small electric fog generators.

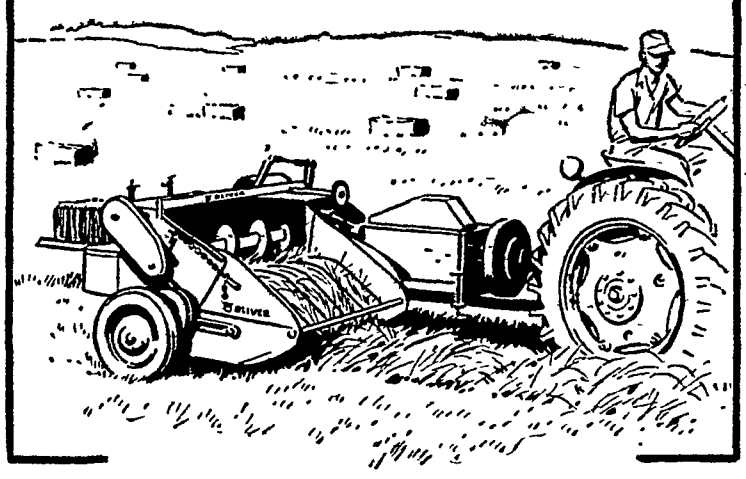
**BALERS**
All-Around Tonnage Champs
with "Pivot-Balanced" Drive



Match a new Oliver—twine-tie or wire-tie—with any other machine in your small, rough, patch-pattern fields. There's where it gobbles up the windrows, bales up to ten tons per hour as easily as on the straightaway.

You get Oliver's exclusive "pivot-balanced" drive ...and exceptionally short coupling. Just follow the windrow with the rear tractor wheel—even around the sharpest corner. Your Oliver gets the hay... saves hours of time when time counts most.

Here are balers with everything: new, leaf-saving pickup...swinging drawbar for safe transport... overrunning clutch (extra)...protective devices for all important units. You can adjust bale length in seconds—from 12 to 50 inches. Twine- and wire-tying units are easy to interchange, and an engine (extra) is easy to mount when desired.

# Improving Home Grounds Course Set By Penn State

The annual short course, "Improving the Home Grounds," will be presented at Penn State, July 6 to 10. This year's course has been designed to concentrate on the latest techniques and materials for those who want to learn how to solve maintenance and other home grounds landscaping problems.

The program should be of special interest to home owners, garden club members, and nurserymen concerned with residential landscaping.

Topics to be considered by the students include tree identification and selection, plant materials, annuals and perennials, shrubs and vines, planting, pruning and fertilization, patio arrangements, insect control, principles of lawn establishment and maintenance, disease control on ornamentals, etc.

Persons 16 years of age or over, with an interest in improving home grounds may enroll.

For further information, and free schedule, write to: Director of Short Courses, College of Agriculture, the Pennsylvania State University, University Park, Pa.

Lancaster Farming advertising brings results.

# Barley Support Set at 88 Cents

The basic county price-support rate for 1959-crop barley in Lancaster County will be 88c per bushel, Landis G. Becker, Chairman, County Agricultural Stabilization and Conservation Committee, has announced.

The rate applies to barley grading No. 2 or better. The county rate will be further adjusted for grades below No. 2 in determining support prices for individual producers. Discounts are the same as under the 1958 program.

Terminal rates are available at the County Agricultural Stabilization and Conservation Office for farmers who wish to store their grain in terminal elevator.

These rates reflect freight and handling charges involved in moving the grain to the terminal.

County and terminal rates also reflect changed transportation costs [illegible] ing areas to ter[illegible] changed relation[illegible] tween terminal [illegible] es.

Price support w[illegible] ried out, as in pre[illegible] through farm-and-[illegible] stored loans and [illegible] agreements

# 'Keystone' Internat'l to Stress Conservation and Grasslands

HARRISBURG—Next November's Pennsylvania Livestock Exposition will further develop the program of the Keystone State livestock industry in making Pennsylvania a great meat producing state through conservation and grassland farming, according to John G. Stephen, Allentown, show chairman.

Stephen pointed out that the Pennsylvania Farm Show Commission recognition of the growing importance of the "Keystone International" has joined forces with the Pennsylvania Livestock and Allied Industries Association in presenting the event November 9 through 14 in the Farm Show Building.

Leon Falk, Jr., president of the PLAIA, has announced that the Association this year will aid in defraying the costs of the Keystone International through the sale of Official Program Books. These books will be sold at a rodeo which will be held in the Large Arena of the Farm Show Building during Exposition Week.

Falk has appointed Dale Ritter, Harrisburg, and Walter Dunlap, Jr., Lancaster, as co-chairmen to sell advertising for the program. Ritter and Dunlap will be working closely with William L. Medford, Chester, and Walter M. Krebs, Johnstown, vice presidents of the PLAIA.

The Official Program Book will include information on the breeds of livestock to be seen at the Keystone International, articles on the various competetive rodeo events and general information on the livestock and meat industry throughout the nation.

Beef cattle, swine and sheep are shown at the Keystone International. Both breeding animals and market animals compete. Being enlarged this year are classes to judge the ability of animals to dress out a large percentage of high quality meat when slaughtered

# Broiler Breeders Still Building Primary Flocks

Indicated placement of pullet chicks for broiler hatchery supply flocks by leading U. S. primory breeders of broiler replacement stock totaled 3,765,000 chicks during April.

This was 13 per cent more than in April, 1958.

Domestic placements during April totaled 3,573,000 chicks. Part of the increase in chicks during April as compared with a year earlier was due to the fact that for a number of hatcheries there were nine days when hatches were taken off in April this year, compared with eight days last year.

So far for 1959 placement of broiler supply pullets total 11,743,000 head, compared with 10,690,000 head during Jan. 1 - May 1 of 1958, and 9,454,000 head in 1957.

The four-month total for 1959 is equal to almost half of total placements for 1957, while running about 10 per cent ahead of 1958.

## DIPPING PROBLEMS?

If ice cream is too hard for dipping, let it stand for about 10 minutes at room temperature or place it in the refrigerator for about one-half hour before planning to serve it.

**Your milk quality goes up...**
*when he drops in!*

Wilson's drop-in refrigeration unit provides magnificent day-after-day performance, security for your milk check. When necessary—if ever—a replacement refrigeration unit can be "dropped-in" in minutes.

- Glacier-Cooling system cools milk instantly and keeps it cool—yet never freezes milk.
- Magic-Mist makes cleaning quick and easy. Prevents formation of milkstone

Meets 3A Standards

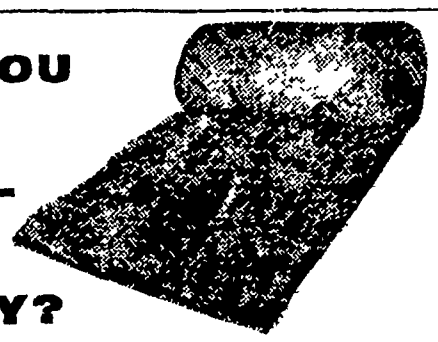
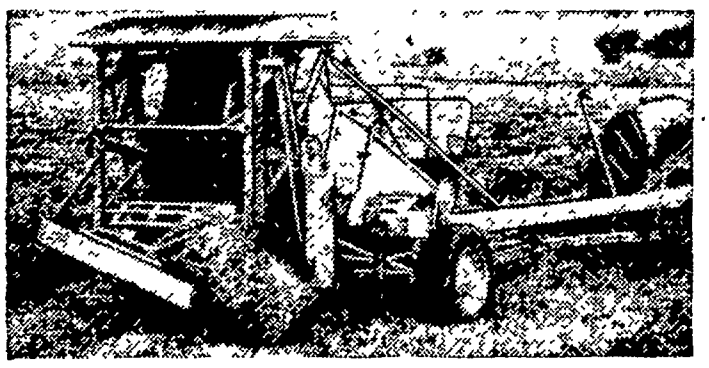
June is Dairy Month !

**HAVE YOU SEEN ROUND-BALE QUALITY?**





There's an important difference in hay when it's put into leaf-saving round bales, that roll in the leaves and protect them against weather damage. Compare the quality with any other hay . . . see the difference for yourself. These unique bales are made only by the ROTO-BALER.

Make up to seven bales a minute with the No. 10 Model ROTO-BALER (shown) . . . continuous-flow, non-stop operation.

Use the standard model ROTO-BALER for big-capacity baling at rock bottom cost.

ROTO-BALER is an Allis Chalmers trademark.

*Ask us about the Allis-Chalmers plan to finance your time purchase of farm equipment.*

JUNE IS DAIRY MONTH!

**Some Essentials in the Proper Feeding and Care of Dairy Cows**

1. Use through-out the year, economical well balanced rations which provide good nutritive requirements.
2. Adjust the amount of feed for each cow to her actual production.
3. Use palatable rations containing a reasonable variety of feed-stuffs.
4. Rations should be slightly laxative rather than constipating.
5. Plenty of good water readily accessible.
6. Dry periods of proper length.
7. Comfortable surroundings both in winter and during pasture season.
8. Regularity in feed and care.
9. Kindness on the part of the herdsman.

Strict observance of these simple essentials will greatly improve net income from the dairy herd.

**Miller & Bushong's Green Pastures Dairy Feeds**

Complete 14% or 16% { now available in economical labor saving bulk

and 32% Concentrate in bags to be mixed with your grain

Will meet all of your herds requirements for

- MAINTENANCE
- MILK PRODUCTION
- GROWTH and REPRODUCTION

For a profitable successful dairy program, call us at Lancaster EXpress 2-2145.
